## Trennex CU Paste

*High Temperature Lubricant*

**Description:** **Trennex CU Paste** is a blend of waxes, high temperature/high pressure additives, viscosity modifiers, and special film formation materials that provide excellent lubrication and clinging properties at elevated temperatures.

**Application:** **Trennex CU Paste** is a modification of Trennex CU-B, it is not designed to be used as a die lubricant. It will not “wet-out” on the tool surface when blown with air. It is designed to cling to hot surface (ejector pins, sliding cores) and provide excellent lubrication properties over extended periods of time.

**Effect** **Trennex CU Paste** is very pressure resistant and is an excellent lubricant in the most severe casting applications.
