

T E C H N I C A L D A T A S H E E T

The characteristics of both models are their sturdy design and reliability – essential requirements for spray guns used in the foundry industry.

UNIGETT – spray guns, type **REATOR SUPER** and type **TIGER**, fulfill these requirements. They are successful and operate on the basis of the injection principle, i.e. a pressure tank for the spray medium is no longer necessary.

Both spray guns operate on a 2 stage system:

half pressure on lever = air only
 full pressure = air spray medium mixture

The release of the spray medium can be adjusted with adjustment screw as follows:

screw in = less spray medium
 screw out = more spray medium

	REATOR SUPER	TIGER
Spaying capacity with 30 PSI and fully open adjustment screw	0.16 gal/min.	0.26 gal/min.
Total length	16.5 in	19.7 in
Weight	17.6 oz	21.2 oz

Our products have been proven in service. However, no guarantee can be offered to cover specific applications.
